Art Unit: 2829

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-11, drawn to a probe, classified in class 324, subclass 754.
 - II. Claims 12-22, drawn to a method of assembling a probe, classified in class 29, subclass 825.
2. The inventions are distinct, each from the other because:
3. Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product could assembled without having the contact fingers in a unitary assembly at some stage of assembly.
4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
5. During a telephone conversation with Mr. Kevin L. Russell on February 4, 2003 a provisional election was made without traverse to prosecute the invention of Group I, claims 1-11. Affirmation of this election must be made by applicant in replying to this Office action. Claims 12-22 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Art Unit: 2829

6. Claims 1-11 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. It is not clear what element 26 of figure 3 is or how it is structured. Apparently it is part of an intermediate product but it is not clear how it is related to the final product.

7. Claims 1-11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

It is not clear in claim 1 what limiting effect the wherein clause of lines 4 plus has on the scope of the claims. It appears that the finished product has no tab. It is not clear if the tab is being claimed or if only the finished product is being claimed. If the finished product is being claimed claim 1 is somewhat of a product by process claim where the process may not be consequential to that which is actually the product. That is, where the product can be made by more than one process.

8. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

9. (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

10. Claims 1-11 are, insofar as understood, rejected under 35 U.S.C. 102(b) as being fully anticipated by any one of Harmon, Evans, Hasegawa or Cherry.

Art Unit: 2829

Element 5 of Hasegawa is considered a tab. Element 72 of Cherry shows active and passive circuit elements mounted on the probe card.

11. A more descriptive abstract is required.
